Architectural Lighting Design & Industrial Applications

About Us

INFOLIGHT is a leading technology company
designes and builds facade lighting and led display systems.

As we believe each architectural design gives
additional panoramic value to the area that it's been built in, we mainly
focus on revealing the character of the structure.

In order to meet the expectation set, with our
industrial designing and technical teams who are expert on their subject,
we consider

architectural value, exterior color, material used,
location and purpose of structure as a whole and launch our projects
within the estimated time period.
